Task 1 notes

We modeld acording to the data requirements
additional choikes and assumptions:

- We discussed nickname as a entity vs as
  a multivalued attribute. We disregarded entity
  since nickname doesnt have any attributes
  itself

- We made Actor and Director disjoint.
  We chose that an actor cant also
  be a director (and the other way around)
  We also chose completeness, since
  a person needs to be actor or director

- We chose a N to N relationship
  between actor and TV series.
  We discussed total participation but
  a series might be animated and have
  0 actors or a actor might be
  unemployed and participate in 0 tv series
